Experience

- Self study, Summer of 2019 - Present

Began self studying in mid-summer of 2019, a year prior to enrolling in University. During this time I dedicated myself to exploring and tinkering with programming, with a prime focus on the javascript language and its ecosystem.

Summary of accomplishments:

- Proficient in JavaScript, with a deep and robust understanding of the language's intricacies developed through thousands of hours of reading and hands-on coding applications.
- Frontend expertise. Proficiency in understanding and working with modern declarative frameworks like React as well as implementing different patterns for creating robust UIs.
- Backend familiarity. Developed solid understanding of the tools and architectural patterns used in backend applications.
- In-depth knowledge of web tooling such as bundlers, static analysis and code transformation tools.
- Solid understanding of the inner workings of programming languages with focus on interpreters. Comfortable discussing about compiler concepts such as lexing, parsing, ASTs, code transformations, javascript engines etc.
